POSITION DESCRIPTION

Position Title: Postdoctoral Research Fellow
Organisation Unit: Institute for Molecular Bioscience
Position Number: NEW
Type of Employment: Full time, Fixed term
Classification: Academic Level A

THE UNIVERSITY OF QUEENSLAND

The University of Queensland (UQ) contributes positively to society by engaging in the creation, preservation, transfer and application of knowledge. UQ helps shape the future by bringing together and developing leaders in their fields to inspire the next generation and to advance ideas that benefit the world. UQ strives for the personal and professional success of its students, staff and alumni. For more than a century, we have educated and worked with outstanding people to deliver knowledge leadership for a better world.

UQ ranks in the world's top universities, as measured by several key independent ranking, including the Performance Ranking of Scientific Papers for World Universities (43), the US News Best Global Universities Rankings (45), QS World University Rankings (48), Academic Ranking of World Universities (55), and the Times Higher Education World University Rankings (69). UQ again topped the nation in the prestigious Nature Index, and our Academic Ranking of World Universities result in the field of Life and Agricultural Sciences is the highest in Australia at 20.

UQ has an outstanding reputation for the quality of its teachers, its educational programs and employment outcomes for its students. Our students remain at the heart of what we do. The UQ experience – the UQ Advantage – is distinguished by a research enriched curriculum, international collaborations, industry engagement and opportunities that nurture and develop future leaders. UQ has a strong focus on teaching excellence, winning more national teaching excellence awards than any other in the country and attracting the majority of Queensland's highest academic achievers, as well as top interstate and overseas students.

UQ is one of Australia’s Group of Eight, a charter member of edX and a founding member of Universitas 21, an international consortium of leading research-intensive universities.

Our 50,000-plus strong student community includes more than 13,000 postgraduate scholars and more than 12,000 international students from 144 countries, adding to its proud 240,000-plus alumni. The University has about 7,000 academic and professional staff and a $1.8 billion annual operating budget. Its major campuses are at St Lucia, Gatton and Herston, in addition to teaching and research sites around Queensland and Brisbane city. The University has six Faculties and four University-level Institutes. The Institutes, funded by government and industry grants, philanthropy and commercialisation activities, have built scale and focus in research areas in neuroscience, biomolecular and biomedical sciences,
sustainable minerals, bioengineering and nanotechnology, as well as social science research.
UQ has an outstanding track-record in commercialisation of our innovation with major technologies employed across the globe and integral to gross product sales of $11billion+ (see http://uniquest.com.au/our-track-record).

UQ has a rapidly growing record of attracting philanthropic support for its activities and this will be a strategic focus going forward.

Organisational Environment

The University of Queensland’s Institute for Molecular Bioscience, located on the main University campus, is Australia’s leading biosciences research institute. Established in 2000, the Institute is home to over 420 staff and is located in thriving Brisbane, a city consistently ranked as one of the world’s most vibrant and liveable cities.

The Institute, ranked in the Top 20 globally for life sciences research, pursues a multidisciplinary approach to solving some of the world’s most serious challenges in the fields of health, disease and sustainable solutions for our cities, fuels and foods. The Institute is housed in a single building and is organized into technological platforms (Divisions) and research themes (Centres). The Divisions support state-of-the art facilities including the Centre for Microscopy and Microanalysis, which houses new cryo-electron microscopes; the NMR facility containing 500, 600 and 900 MHz machines; the Mass Spectrometry Facility accommodating a wide array of instrumentation; suites for work with a variety of model organisms; a plethora of next generation DNA sequencing technologies and the southern hemisphere’s leading program in complex genetic traits. The Research Centres accommodate 36 groups using a combination of genomics, chemistry and cell biology to take life science discoveries from the genome to drug design and application in the areas of antimicrobial resistance, inflammation, pain, cardiovascular disease and rare and developmental diseases.

The quality of our internationally recognised researchers underpins our research excellence. Over the past five years, our group leaders have attracted nearly $250 M in research funding. They have leveraged funding from over 40 different national and international research sponsors including significant support from federal and state government sources. The success rate in federal funding schemes is amongst the highest in all of Australia. The accomplishment of our staff is reflected by the consistent contribution they make to the prestigious Nature science index and by the fact five are listed in the prominent 2018 Clarivate Highly Cited Researchers List.

A cornerstone of the Institute is the strong emphasis on ensuring our discovery science has impact by translating our research discoveries to meet industry, community and clinical needs. The Institute has generated more than 30 patent families and has spun out multiple companies. The impact of our work is illustrated by two biopharmaceutical companies founded in the Institute, Protagonist Therapeutics Ltd and Inflazome Ltd. The former company entered into a $1 B worldwide agreement to co-develop a drug for inflammatory bowel disease and the latter recently received $70 M to develop treatments for inflammatory diseases. Our ambition to strengthen our translational portfolio continues. For example, in the last 12 months researchers from the IMB:

• were part of a successful push to put endometriosis on the national agenda to improve understanding, treatment and support of this debilitating disease
• identified genetic factors contributing to the risk of developing diseases like endometriosis and motor neurone disease, advancing our understanding of these disorders on a global scale
• discovered a new type of cell in the brain that mops up cellular waste and may provide protection against stroke and dementia
• discovered a small protein in spider venom that could prevent the devastating brain damage caused by stroke
• discovered we could shrink brain tumours using existing breast cancer treatments
• found a promising potential treatment for breast cancer that blocked cancer spread and improved survival rates in models
• discovered a molecular trigger for inflammation that could lead to new treatments for rheumatoid arthritis, inflammatory bowel disease and neurodegenerative diseases
• furthered research in development of new medicines for treating inflammatory diseases, including allergies, by building molecular switches that can control immune response
• as part of a global team, identified a new gene behind a rare form of inherited childhood kidney disease
• combated superbugs by creating a new diagnostic, repurposing old drugs and continuing to crowdsource the next antibiotic
• developed the first new therapy in over 30 years to be used successfully in patients to treat antibiotic resistant infections
• helped an Australian family-owned company create the first mass-produced organic insecticide from peptides found in the Butterfly Pea plant
• initiated a program to use algae to produce clean water, livestock feeds, foods, fuels and medicines

IMB’s research outcomes are protected and commercialised by UQ-owned technology transfer group UniQuest.

Details of the research interests of the Institute may be accessed on the Institute’s website at: https://imb.uq.edu.au/

Information for Prospective Staff

The Institute recognises and values equity and diversity, and encourages applications from any individual who meets the requirements of this position irrespective of gender, sexuality, race, ethnicity, religion, disability, age or other protected attributes.

IMB strives to provide an inclusive working environment, and along with the University is committed to supporting staff with family and caring responsibilities by providing policies, programs and initiatives to help balance work and family responsibilities.

Specific initiatives at IMB can be found at (https://imb.uq.edu.au/about/equity-and-diversity-imb)

Information about life at UQ including staff benefits, relocation and UQ campuses is available at - http://www.uq.edu.au/current-staff/working-at-uq

The University of Queensland Enterprise Agreement outlines the position classification standards for Levels A to E.

**DUTY STATEMENT**

**Primary Purpose of Position**

We are working on an Australian Research Council funded collaborative project in exciting, cutting edge research using advanced live cell imaging and developing machine learning and artificial intelligence for image analysis of large image data sets towards understanding the innate immune system. The appointee will lead a project seeking to characterise cell surface features on mammalian cells with key roles in immunity and cancer. The role entails
generating large amounts of live cell imaging data for the collaborative development of machine learning, artificial intelligence and virtual reality approaches for analysing cell surfaces. In conjunction with other UQ facilities and our collaborators overseas, the role will make use of the very latest technologies for imaging and big image data analysis. In this role there will be opportunities for working with multidisciplinary research and industry partners on a global stage.

Duties

Duties and responsibilities include, but are not limited to:

Research

- Plan and conduct laboratory work to label mammalian cells with fluorescent tags and treat cells under different physiological conditions.
- Perform microscopy on a number of advanced imaging platforms, working with expert imaging staff.
- Collect and process terabyte-size data files.
- Collaborate closely with researchers and groups developing advanced image quantification and analysis methods.
- Supervise postgraduate students and staff.
- Participate in group meetings to discuss and plan work.
- Work independently and as part of team and work collaboratively with other groups.
- Analyse and write up research data for publication in leading international journals.
- Present findings at meetings, seminars and conferences.
- Work towards translation of findings with industry partners.

Service and Engagement

- Contribute to the processes that enable the academic team to work within the framework of the Institute.
- Any other duties as reasonably directed by your supervisor

Other

Ensure you are aware of and comply with legislation and University policy relevant to the duties undertaken, including but not exclusive to:

- the University's Code of Conduct
- requirements of the Queensland occupational health and safety (OH&S) legislation and related OH&S responsibilities and procedures developed by the University or Institute/School
- the adoption of sustainable practices in all work activities and compliance with associated legislation and related University sustainability responsibilities and procedures
- requirements of the Education Services for Overseas Students Act 2000, the National Code 2007 and associated legislation, and related responsibilities and procedures developed by the University
Organisational Relationships

The position reports jointly to Professor Jennifer Stow and Dr Nicholas Hamilton.

SELECTION CRITERIA

**Essential**
- PhD and expert knowledge in cell biology, biochemistry, immunology, laser physics or a related field.
- Expertise in microscopy and cell imaging, some experience in laboratory work on cells.
- Ability to lead research and work collaboratively with colleagues in cross-disciplinary teams.
- Commitment to upholding the University’s values, and with the outstanding personal qualities of openness, respectfulness and integrity

**Desirable**
- Knowledge or expertise in quantitative methods for microscopy and image analysis.
- Developed industry liaisons and professional contacts.
- Experience in liaising and collaborating with external agencies to develop co-operative research initiatives.

The University of Queensland values diversity and inclusion and actively encourages applications from those who bring diversity to the University. Please refer to the University’s Diversity and Inclusion webpage (http://www.uq.edu.au/equity) for further information and points of contact if you require additional support.

This role is a full-time position; however flexible working arrangements may be negotiated.

Accessibility requirements and/or adjustments can be directed to IMB HR.
