Network Operations Specialist

	DIRECT REPORTS AND TEAM SIZE:
Network Operations Lead	Nil

THIS ROLE EXISTS TO: (PURPOSE)

The function of the Network Operations Specialist is to work innovatively and collaboratively across water supply operations and with internal and external stakeholders to ensure optimal operation of the water transfer network. The Network Operations Specialist will develop and deliver strategies to optimise and automate the operation of the water supply transfer network to deliver benefits in terms of service efficiency, regulatory compliance, customer service and safety.

KEY ACCOUNTABILITIES:

The Network Operations Specialist will: -

- Develop and implement network optimisation strategies through the deployment of new technologies, data integrity and analysis tools, the use of operational modeling, smart water networks and control system upgrades.
- Review and understand the Melbourne Water Resources System Strategy and deliver the operational actions required therein.
- Review and improve systems and strategies for water harvesting & transfer in accordance with bulk entitlement and bulk water supply agreement obligations and develop and implement network optimisation improvements.
- Actively engage with stakeholders to provide technical and analytical support on the operation of the Water Supply System for capital delivery, field staff, the Water Control Center, service providers and other stakeholders.
- Review and understand electricity contracts and identify opportunities to optimise electricity use within Water Supply Transfer Operations.
- Support the integration of new hydro generators to the system and ensure optimal power generation across the existing hydro network.
- Support incident and emergency management on the transfer system as required.
- Investigate and report on SLA breaches and review Standard Operating Procedures as required
- Take care of own and colleagues Health and Safety through identification and reporting of hazards and active involvement in improvement initiatives.
- Participate in Duty Manager Roster as required by the business

KEY RESPONSIBILITIES	KPIs			
Strategic Requirements Drive and facilitate remote control and automation opportunities across water transfer, electricity use and hydro generation Ensure maximum efficiency in the transfer network Minimise power costs to transfer water and deliver environmental requirements Maximise hydro generation and identify new opportunities and work with the business to see them implemented	 Remote control and automation opportunities are identified and implemented across the network Power use in Water Supply is managed to achieve minimum cost Hydro generation is carefully monitored and generation is optimised Optimal Regulation of the 10 storage reservoirs is achieved Environmental requirements for river flow are met 			

Job Level:

Assessed by:

Network Operations Specialist

Assist in the development of Annual Operating Plan process and the models that underpin it with a view to optimal regulation of the 10 major Water Supply storages and transfer system

Review environmental flow release requirements and identify and develop business cases for potential improvements in efficiency of their delivery

Identification of opportunities for continuous improvement at a network level

 Customer needs identified and ensure program and system improvements meet their needs

Continuous Improvement

Provide whole-of system network oversight and identify opportunities for strategic improvement

Drive improvement in IT systems and automation to streamline management of the water transfer network and optimise power usage and hydro generation

Enhance business improvements through data analytics and other business intelligence tools in conjunction with process engineers

Stakeholder Engagement

As the Network Operations Specialist, you will provide internal stakeholders with technical expertise to ensure best for business results across a range of issues including, water transfer, power usage and hydro generation.

Liaise and consult with Retail Water Company operations representatives and stakeholders, internal and external when requested regarding technical matters effecting harvest, water transfer, power, hydro generation and other operational issues.

Work with internal stakeholders to ensure that planning and capital projects reflect operational needs with respect to water transfer, power and generation

- Customer needs identified and advice and expertise provided meet their needs
- Reduction of unplanned impact to customers and community

Safety and Incident Management

Ensure all activities are carried out with safety front of mind to ensure zero harm

Support emergency response and provide advice and direction as required on the operating parameters of the transfer system including appropriate management of the incident processes (Incident Manager) using Melbourne Water's Incident Management system

- No OH&S incidents
- Commitment to Melbourne Water's aim of zero harm, to our staff including our contractors and general public.
- Assist with management of emergencies and incidents affecting the Water Supply System.

Job Level:

Assessed by:

Network Operations Specialist

Participate	in	the	after-hours	Duty	Manager
roster.
